Project Title: Groundwater depletion scenario for India – use of isotopes and modeling

Project Number: IMURA0930

Monash Main Supervisor (Name, Email Id, Phone): Prof. Ian Cartwright
Ian.Cartwright@monash.edu

Monash Co-supervisor(s) (Name, Email Id, Phone): NA

Monash Head of Dept/Centre (Name, Email): Prof Sandy Crudden

Monash Department: School of Earth Atmosphere and Environment

Monash ADGR (Name, Email): Prof. Emanuele Viterbo
Emanuele.Viterbo@monash.edu

IITB Main Supervisor (Name, Email Id, Phone): Prof. Pennan Chinnasamy,
P.Chinnasamy@iitb.ac.in

IITB Co-supervisor(s) (Name, Email Id, Phone): NA

IITB Head of Dept (Name, Email, Phone): Prof. Satish Agnihotri,
Head.ctara@iitb.ac.in

IITB Department: Centre for Technology Alternatives or Rural Areas - CTARA

Research Clusters:  Research Themes:

Highlight which of the Academy’s CLUSTERS this project will address? (Please nominate JUST one. For more information, see www.iitbmonash.org)

| 1 | Material Science/Engineering (including Nano, Metallurgy) |
| 2 | Energy, Green Chem, Chemistry, Catalysis, Reaction Eng |
| 3 | Math, CFD, Modelling, Manufacturing |
| 4 | CSE, IT, Optimisation, Data, Sensors, Systems, Signal Processing, Control |
| 5 | Earth Sciences and Civil Engineering (Geo, Water, Climate) |
| 6 | Bio, Stem Cells, Bio Chem, Pharma, Food |
| 7 | Semi-Conductors, Optics, Photonics, Networks, Telecom, Power Eng |
| 8 | HSS, Design, Management |

Highlight which of the Academy’s Theme(s) this project will address? (Feel free to nominate more than one. For more information, see www.iitbmonash.org)

| 1 | Advanced computational engineering, simulation and manufacture |
| 2 | Infrastructure Engineering |
| 3 | Clean Energy |
| 4 | Water |
| 5 | Nanotechnology |
| 6 | Biotechnology and Stem Cell Research |
| 7 | Humanities and social sciences |
| 8 | Design |
The research problem
Climate Change can have drastic impacts on the hydrological cycle (erratic rainfall, floods and droughts). India is a rural economy driven country, and with most population under rural livelihood, it is of utmost important to understand the climate change impacts on agricultural productivity and water sustainability. Under such circumstances, it is necessary to understand groundwater impacts due to climate change stressors.
In India, the highest extractor of Groundwater, there is good amount of research on groundwater quantity but not quality. The groundwater quantity is also based on groundwater level records and not on isotopes, which would give a different hypothesis.

Project aims
Primary objective of the project is to understand the reasons for groundwater depletion using a combination of groundwater level and chemistry data. Secondary objectives include understanding reasons for ongoing groundwater depletion in rural India.

Expected outcomes
- Sensitization of ongoing agriculture water stress and climate change impacts
- Assessment of future climate change impacts on agriculture
- Sustainable agricultural water use practices
- Realistic scenarios for agricultural water management

How will the project address the Goals of the above Themes?
The project will primarily focus on WATER theme, wherein holistic water management practices will be researched. Also, novel information on site specific surface water groundwater interactions will be studied and researched in this project, which are related to WATER theme.
This project will also use GIS and computer simulation models for data processing and simulation of surface water and groundwater interactions. This requires high level of simulation expertise which will be under the SIMULATION theme.

Capabilities and Degrees Required
- The student should have a Masters degree that has a hydrological focus (e.g. water resources management, civil engineering, hydro informatics, etc.)
- Experience in field work, remote sensing GIS and computer simulation models.
- Programming skills/data management skills to manage large datasets
- Excellent writing skills

Potential Collaborators
Please visit the IITB website www.iitb.ac.in OR Monash Website www.monash.edu to highlight some potential collaborators that would be best suited for the area of research you are intending to float.

Prof. Ian Cartwright has been identified as the potential research collaborator. He has extensive experience on groundwater modelling. A Skype meeting has been conducted and details of the collaboration discussed.
Select up to (4) keywords from the Academy’s approved keyword list (available at http://www.iitbmonash.org/becoming-a-research-supervisor/) relating to this project to make it easier for the students to apply.

Water resources management, Climate change; Modelling and simulation; Hydrogeology.
